Advanced ADSL Filtering For Future ADSL Networks

Flexibility And Reliable ADSL-2 Filtering For Tomorrow

Looking for a faster and more stable ADSL connection at home or office?

The **M-ADSL-FILTER** series of ADSL2+ micro filters from Dynamode might just give you the extra performance you need. With a robust build quality, long MTBF components and second-to-none post assembly testing helps you maximise your ADSL connection potential.

Fully compatible with the latest ADSL2+ standards, exceeding BT SIN 346 v2.2 guidelines, the M-ADSL-FILTER series is ideal for almost all UK standard ADSL lines and compatibility is assured for use with DECT (digital) cordless phones as well as regular PABX (POTS) systems found in homes and business everywhere.

Being Plug n' Play means you can simply discard your low quality ADSL micro filter that came with your ADSL router and upgrade to the new Dynamode M-ADSL-FILTER series.

Available in regular compact design, or if required, tailed version for hard-to-reach phone points (**M-ADSL-FILTER-T**).

specifications:

Standard, UK-wide ADSL/BT connection assured

ADSL-2 performance with improved data performance

Exceeds BT SIN 346 v2.2 guidelines for the UK

Reduced signal leakage for improved speech and data
