ADDERView DDX CAM

Computer Access Module (transmitter) for DDX range

Overview

Part of the ADDERView® DDX® range, the DDX CAM is a Zero U Computer Access Module (CAM) which attaches a source computer to either the DDX10, DDX30 or DDX USR. When connected directly to the DDX USR, it creates a KVM extender. When combined with the DDX10 or DDX30, it forms an integral part of a KVM Matrix. Available in DisplayPort, VGA and DVI variants.

- **Compact and efficient:** powered by a single USB connection, it takes up 'Zero U' on your rack
- **Distribution:** available with DisplayPort, DVI or VGA ports, and HDMI via a passive converter
- **Easily expand your installation**: for each new computer system and user, simply add a USR and CAM module, safeguarding your investment
